Tutorial Guide

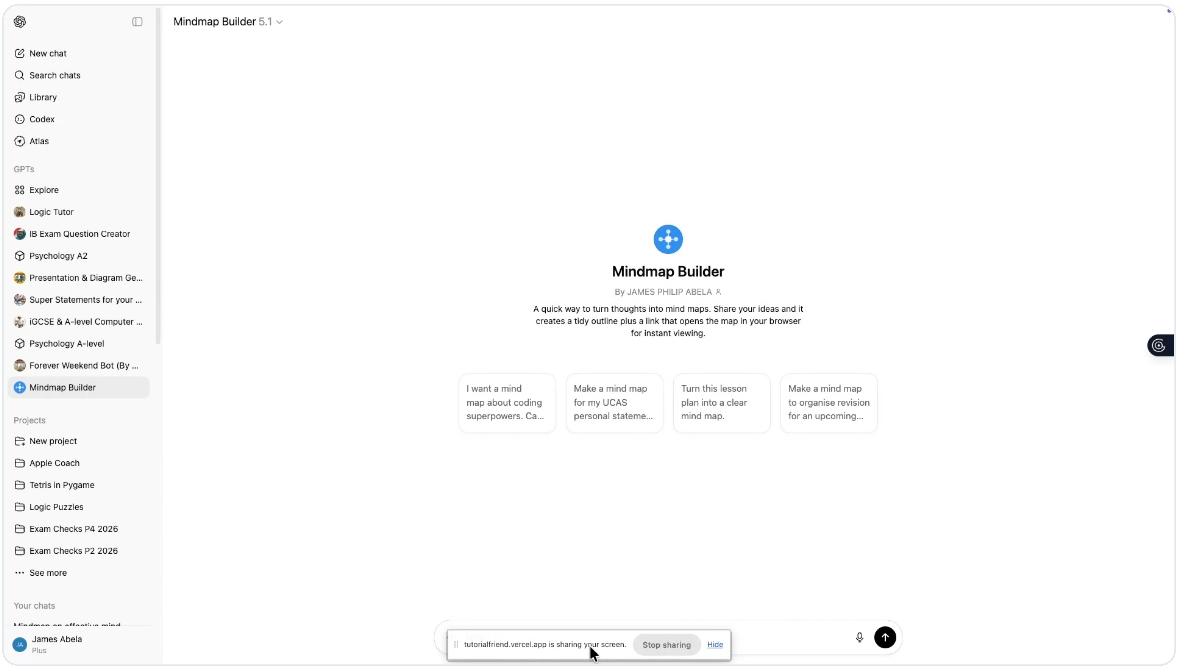

Generated by TutorialFriend

01

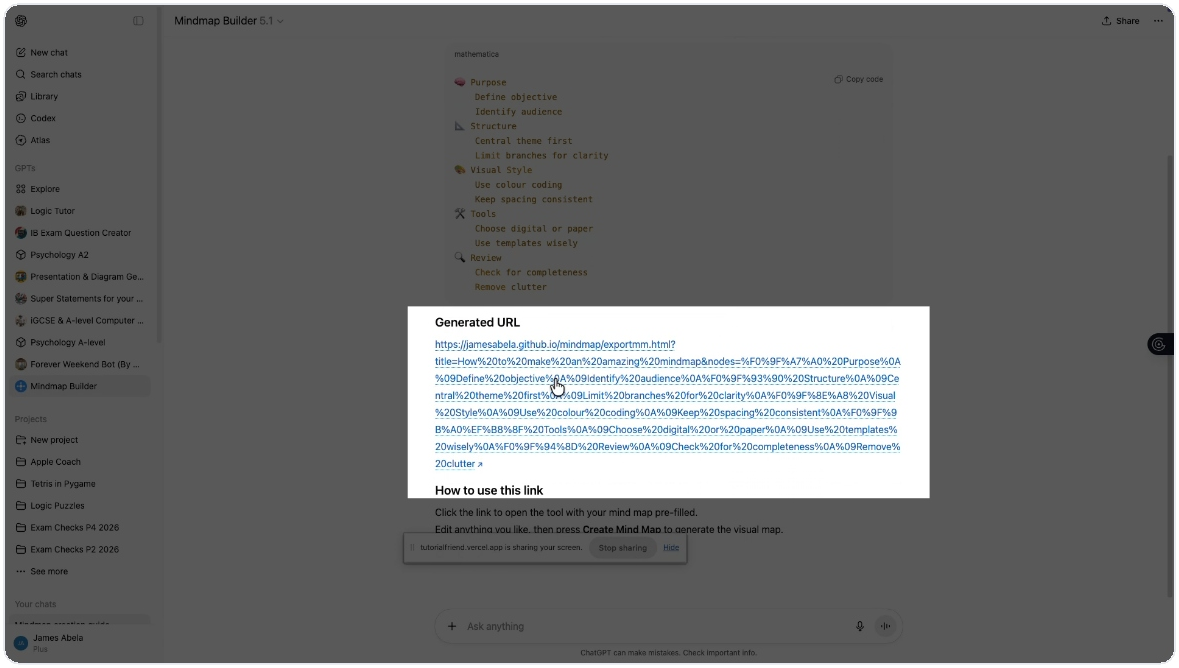

Go to https//github.com/jamesabela/mindmap to get started

02

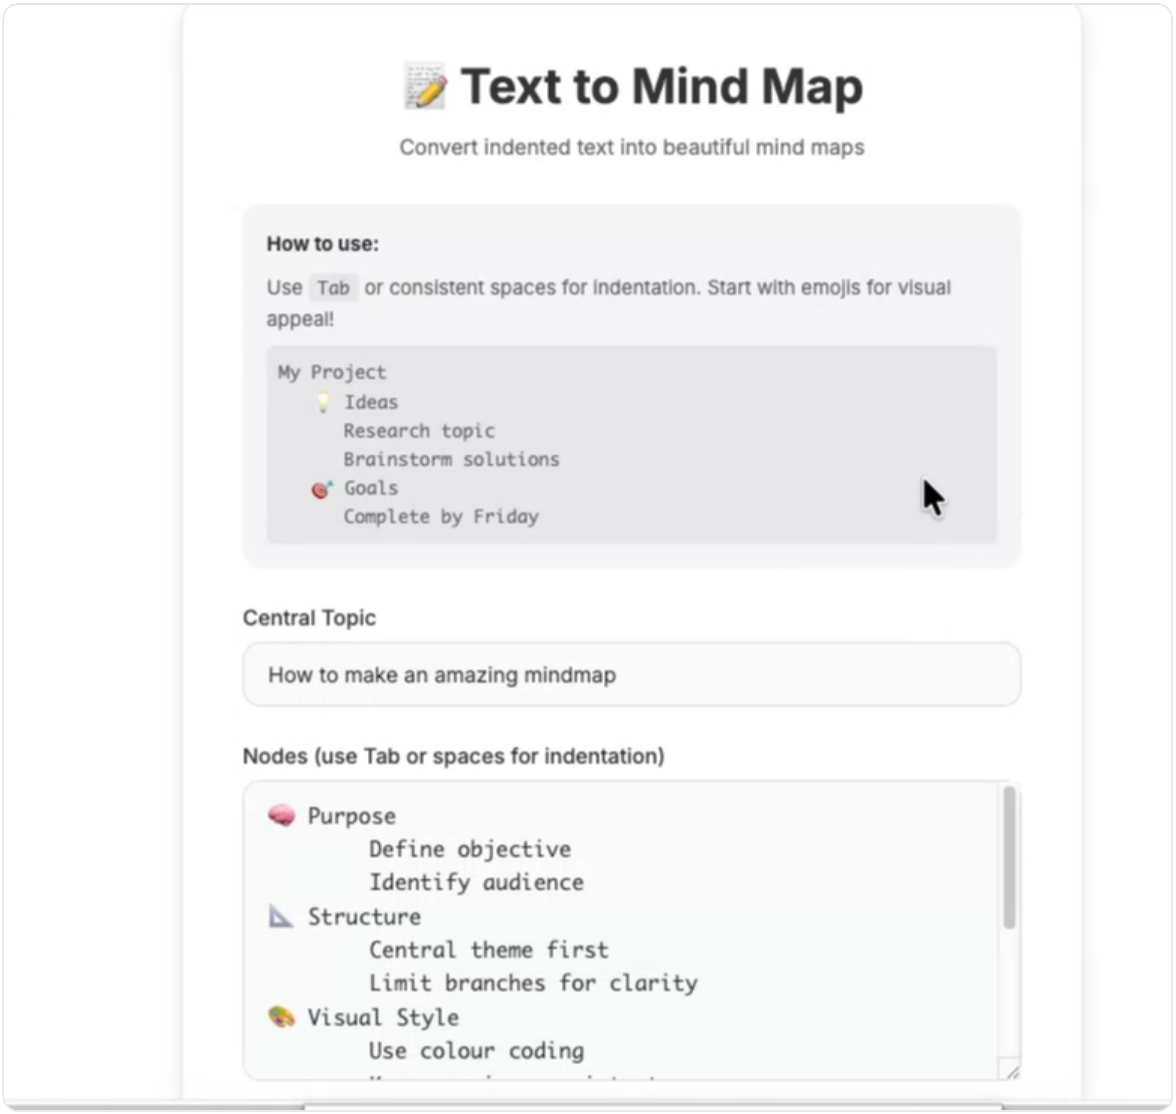

You can use this customGPT to generate a Mindmap for you.

03

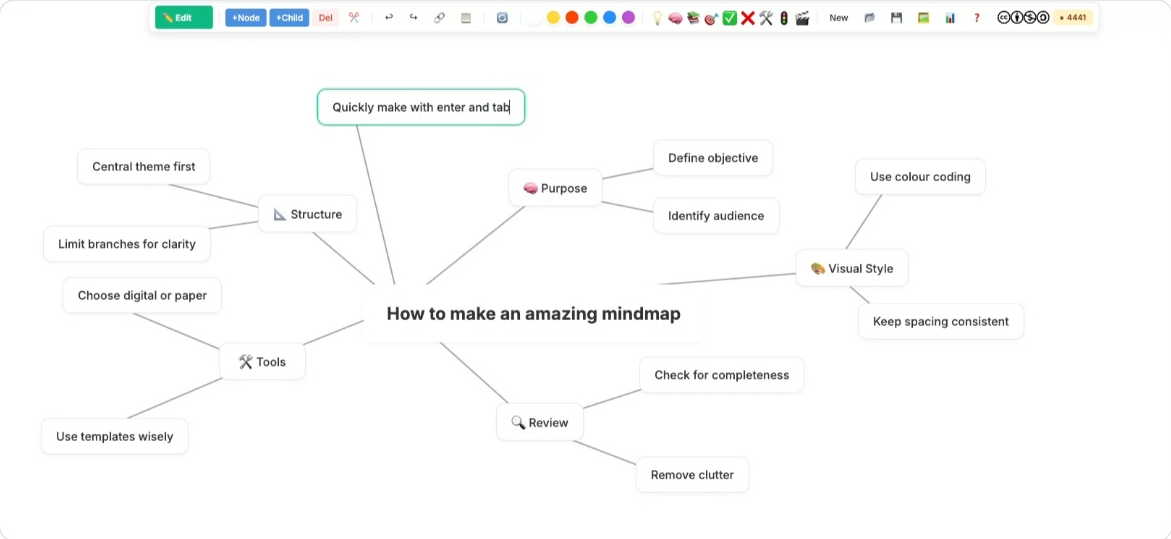

Click on the link to generate

04

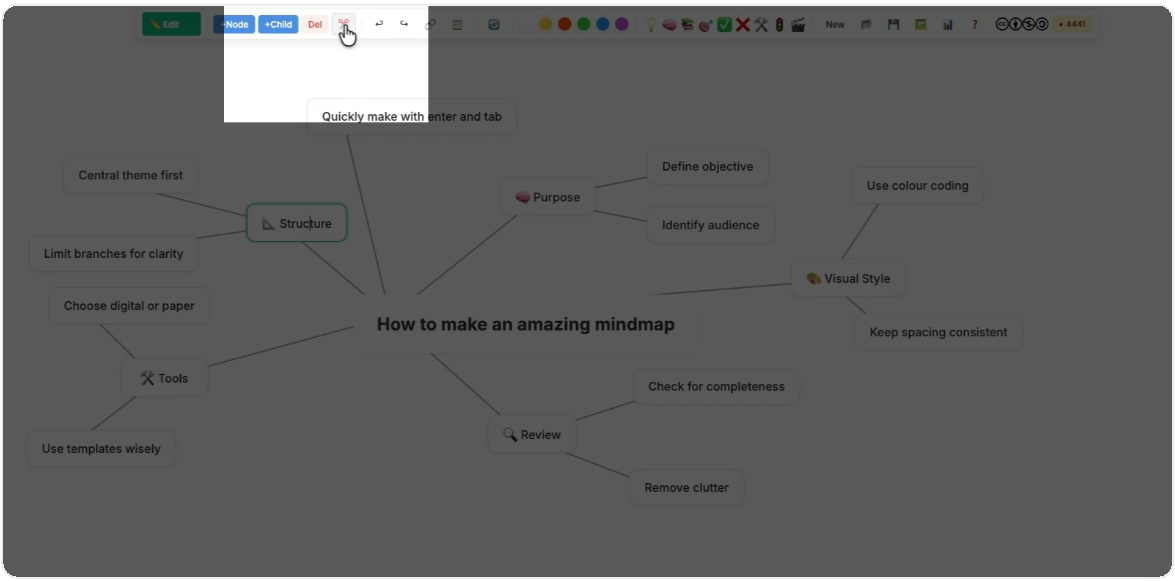

It will generate topic and Nodes for you. You can still edit if you please before making a Mindmap Alternatively you can start with a blank Mindmap

05

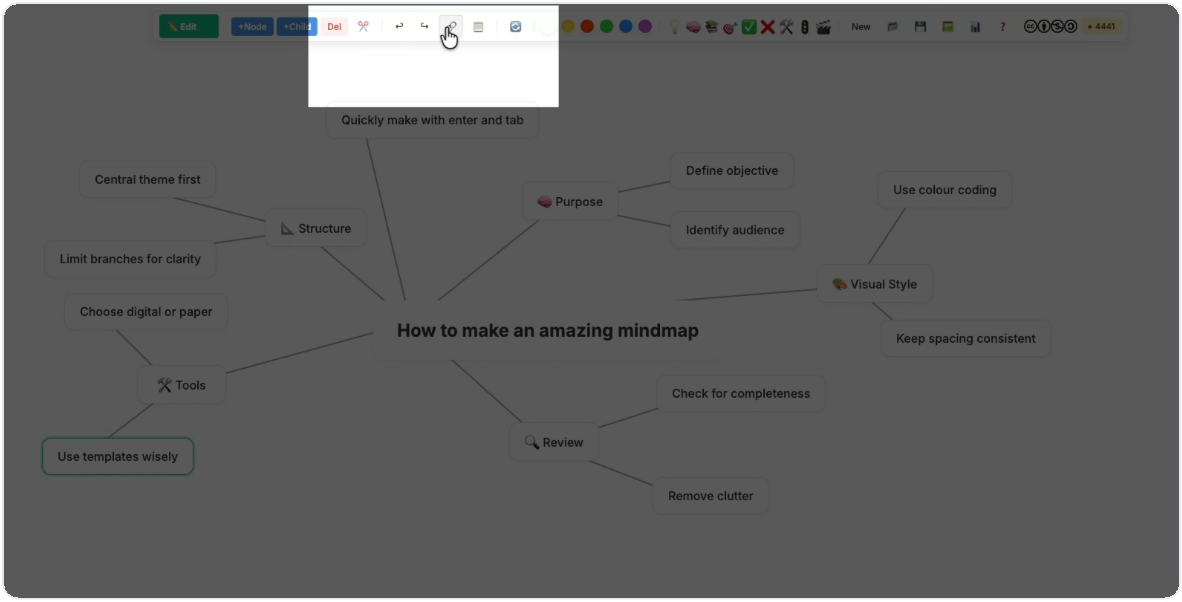

Use Enter and Tab to quicklycreate new nodes.

06

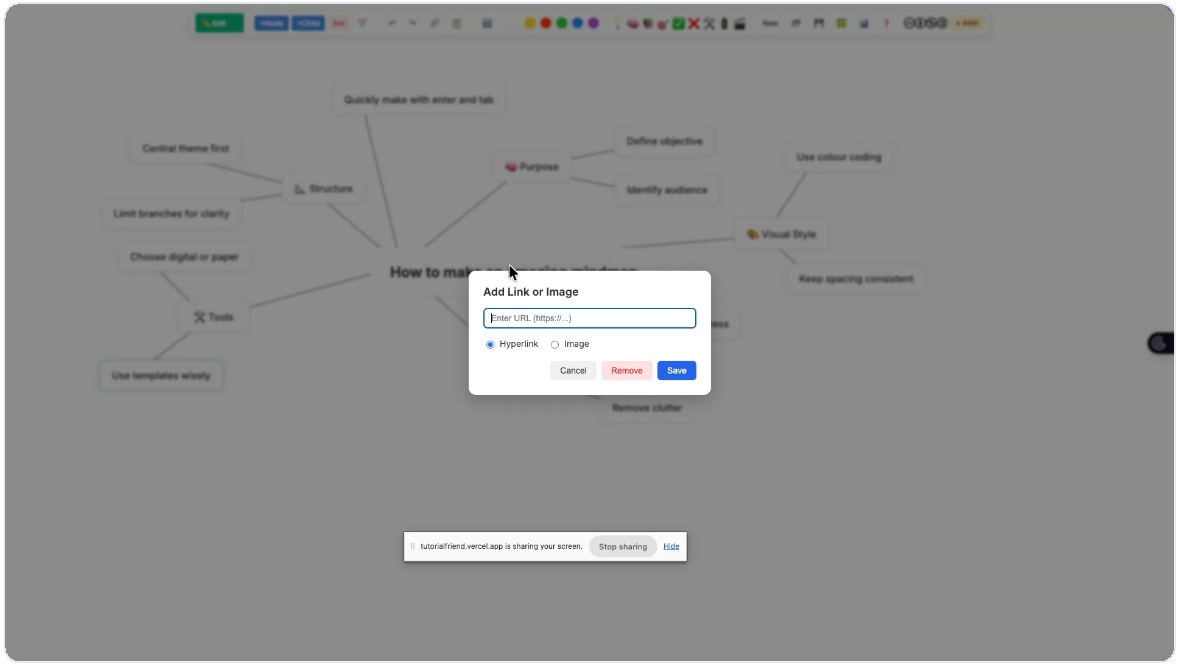

If your Mindmapgets too big use the snippingtool to put the node and its childreninto a new mindmap

07

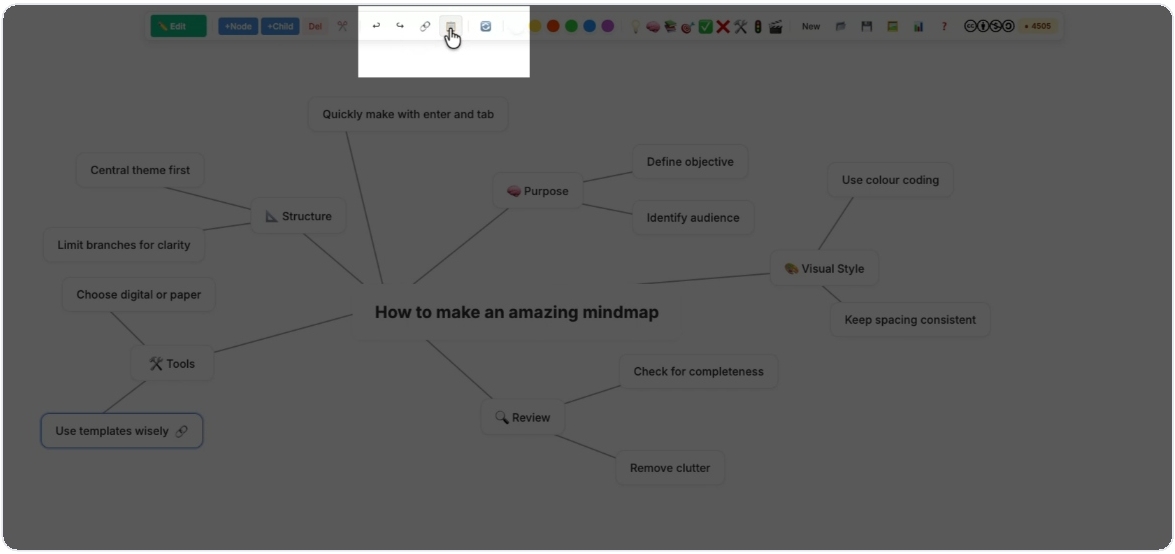

You can create links and images with the link button

08

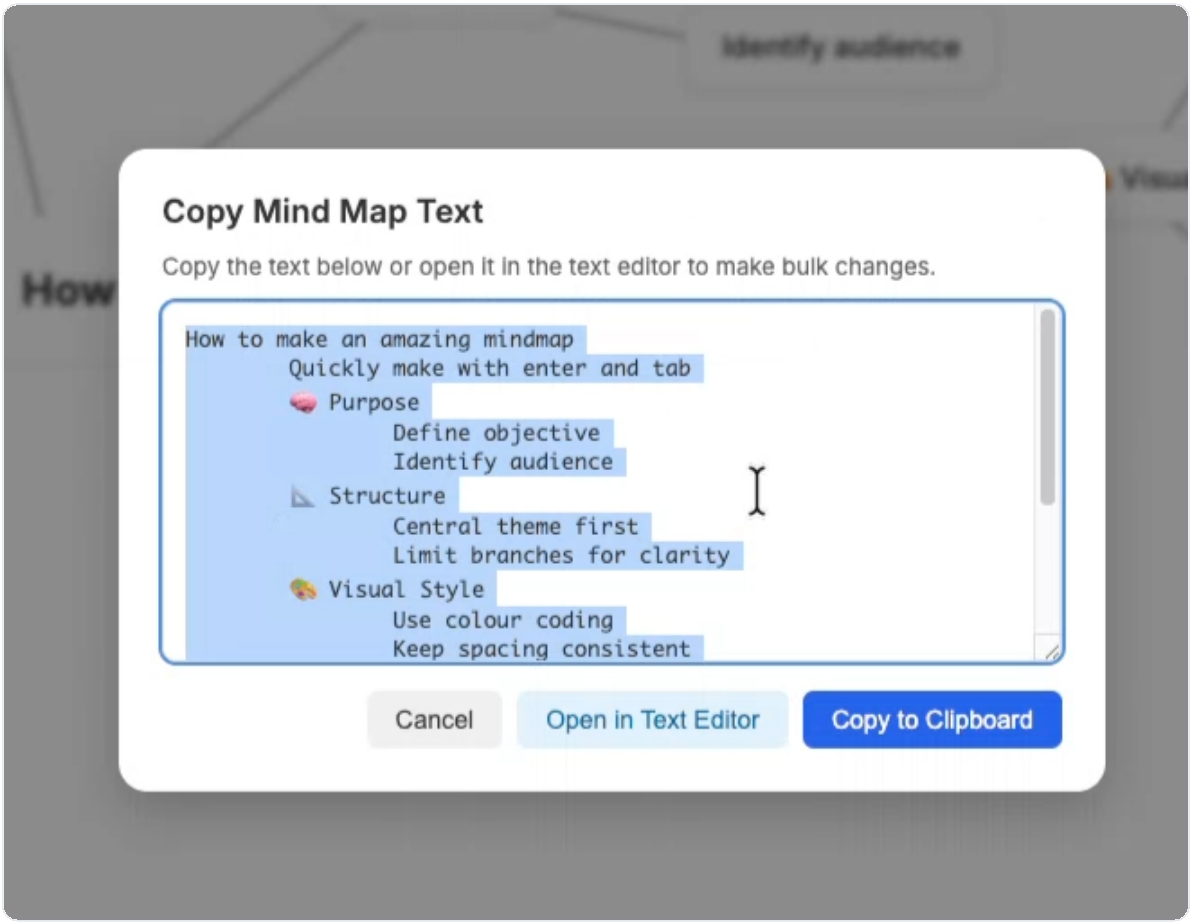

Just copy and paste or type the link you want

09

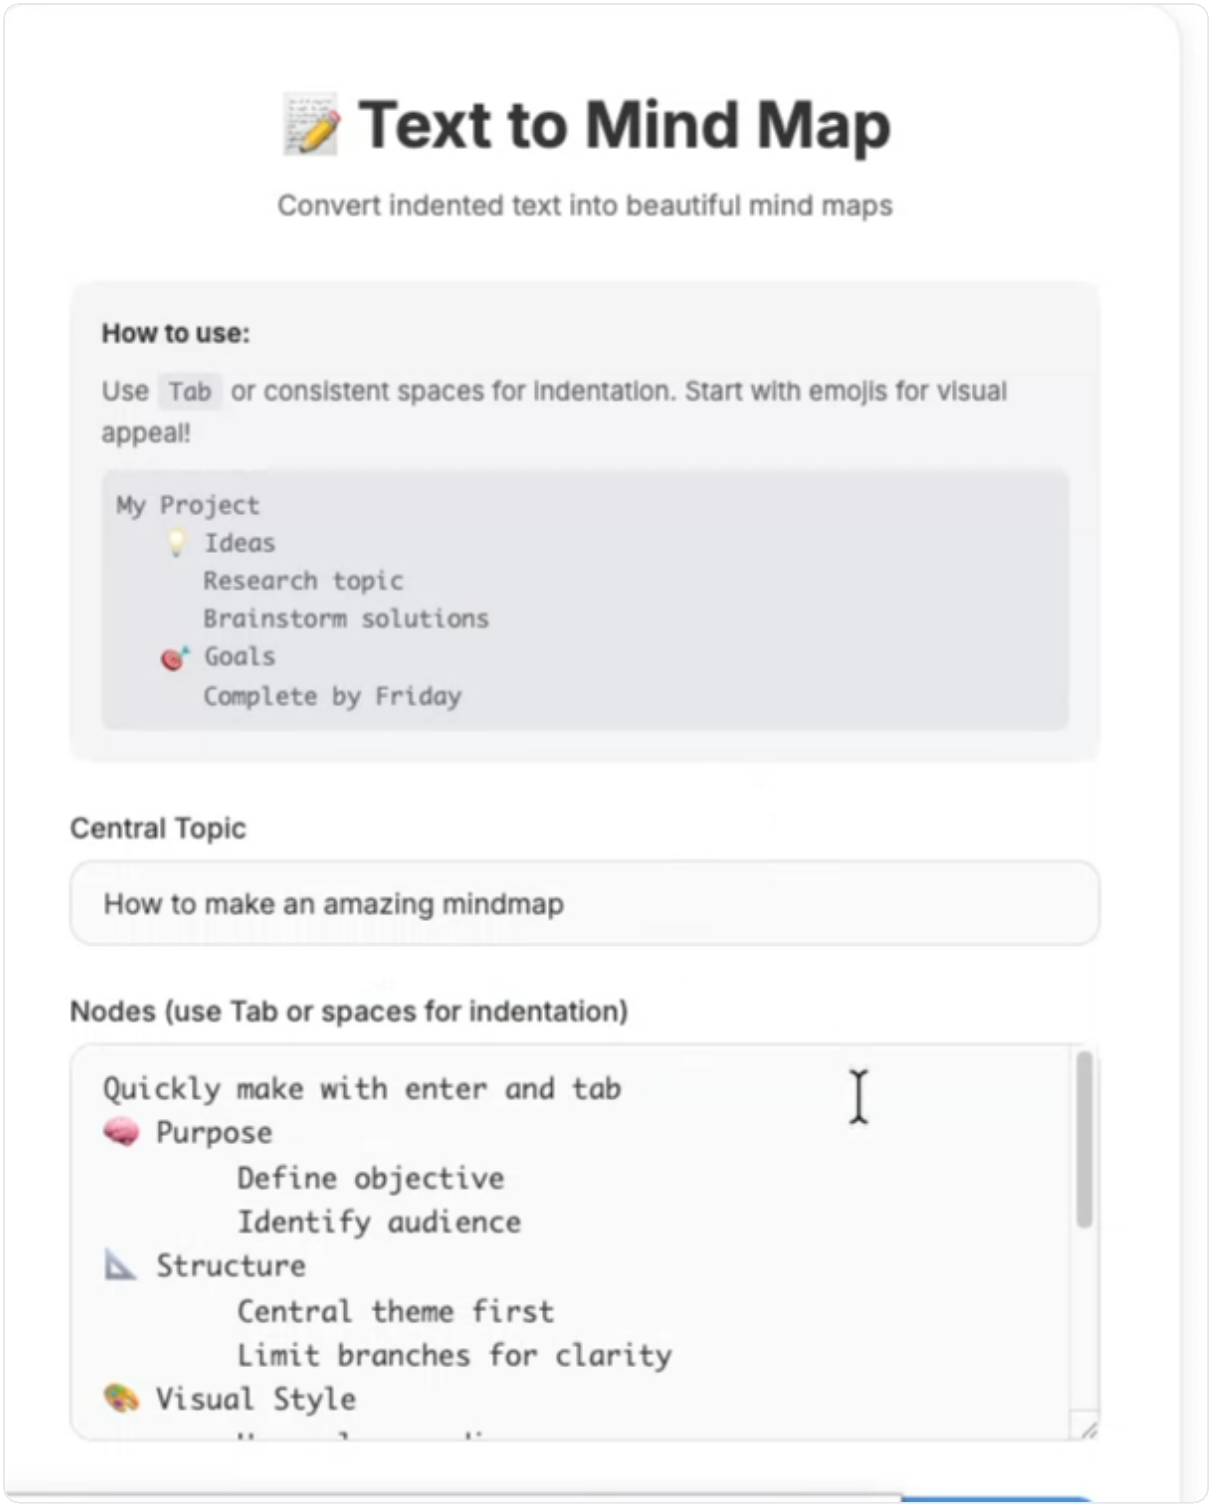

Use the clipboard to either copy all the text or for quick text editing of the Mindmap

10

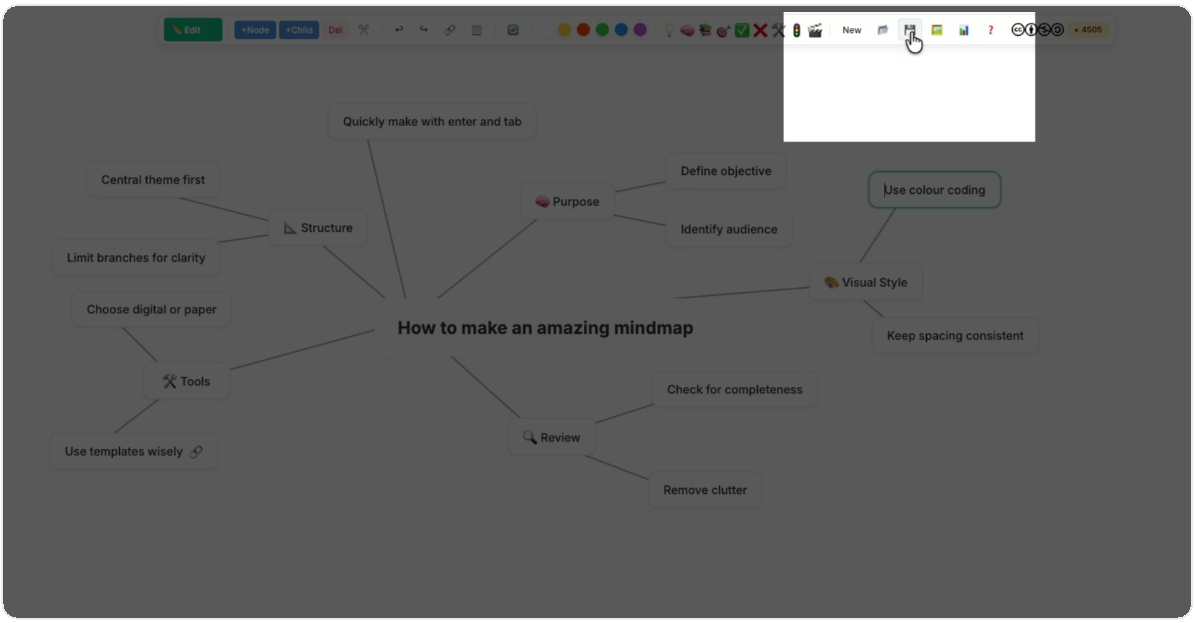

Either copy to the clipboard for use in PowerPoint, slides, Keynote or a word processor or you can use the built in text editor to edit the Mindmap itself

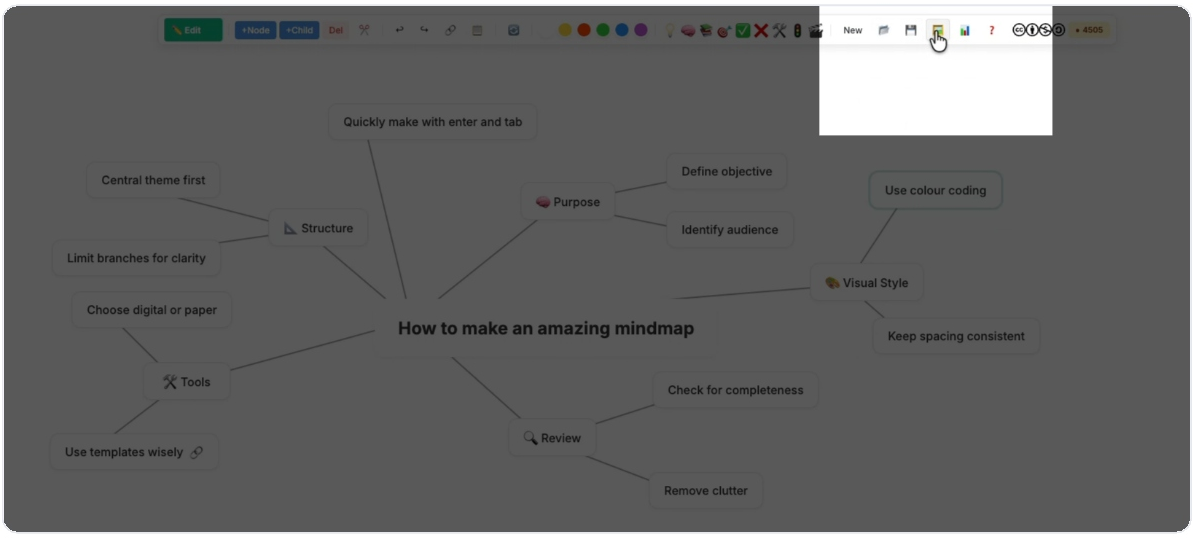

Here you can edit the Mindmap as text and make a new design

12

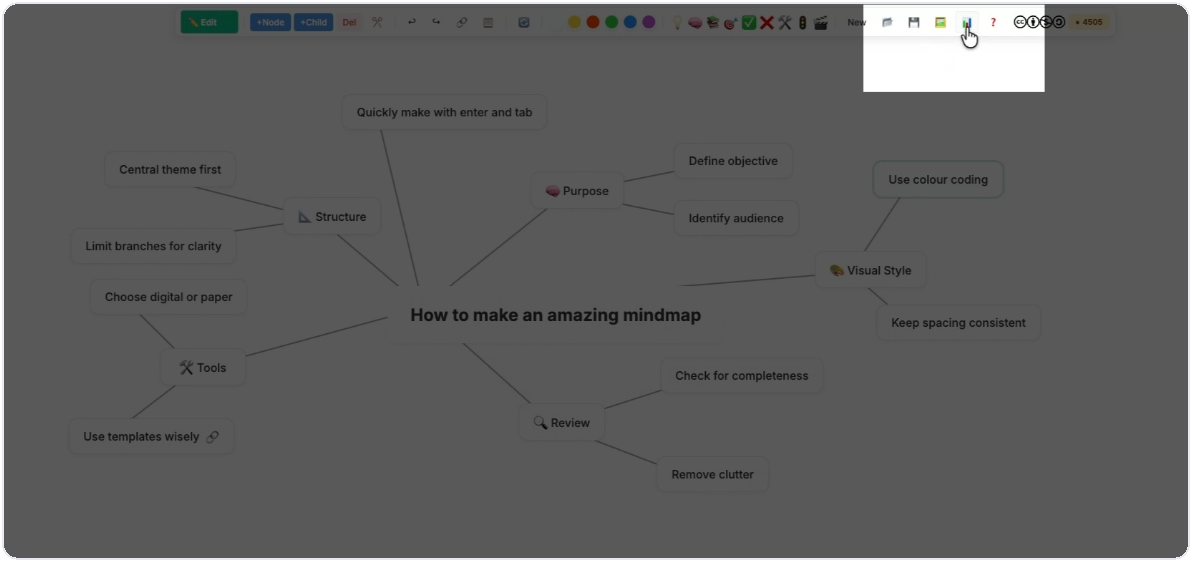

You can save your Mindmapto your computer

13

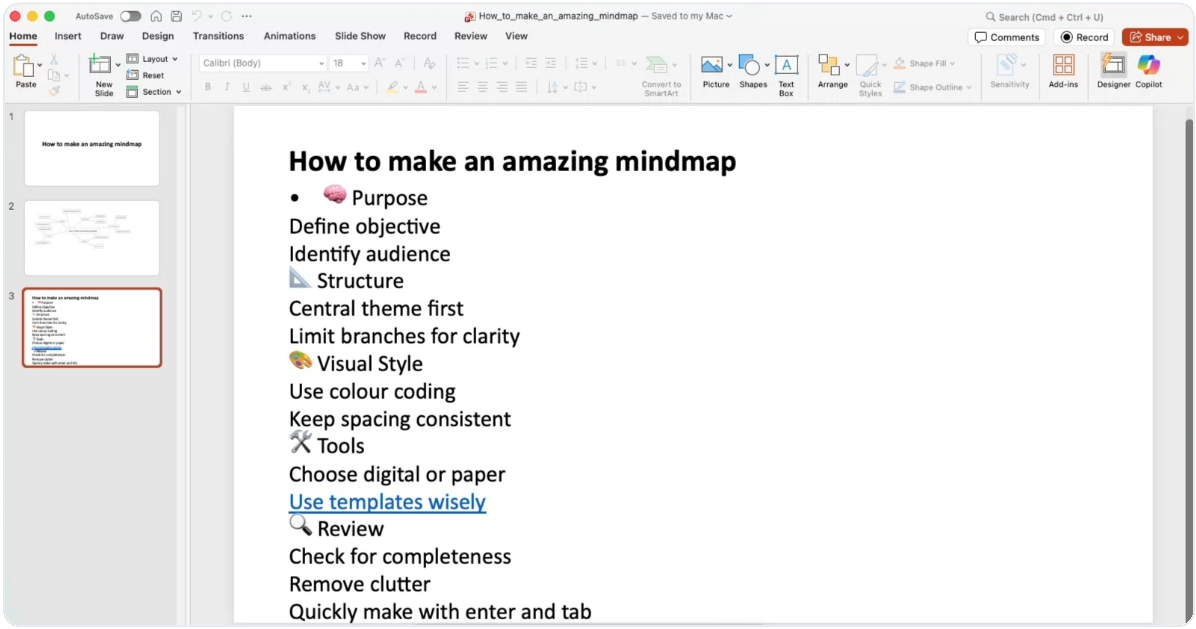

You can save an image.

14

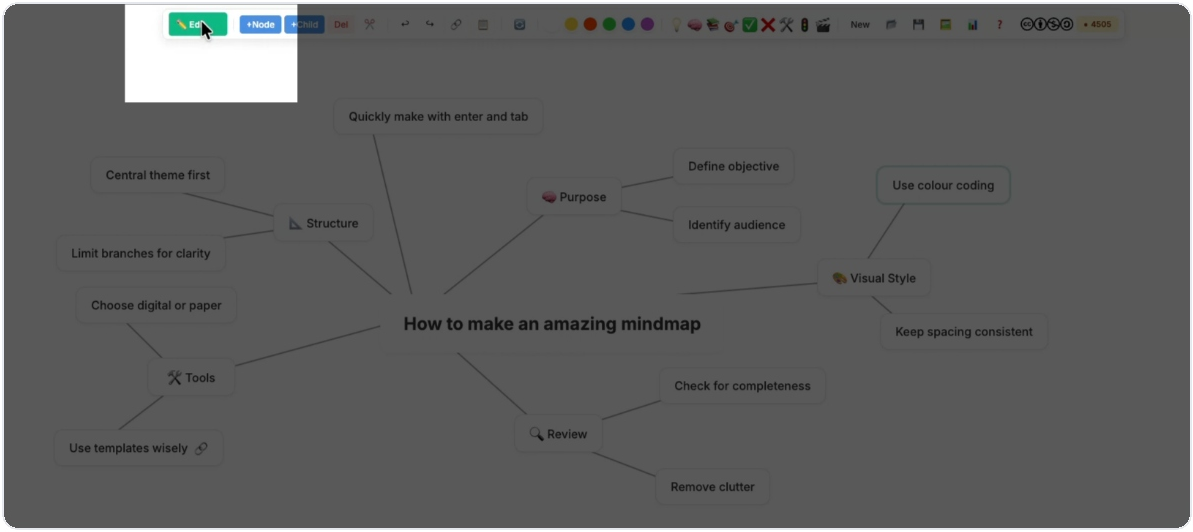

You can save a PowerPoint file

15

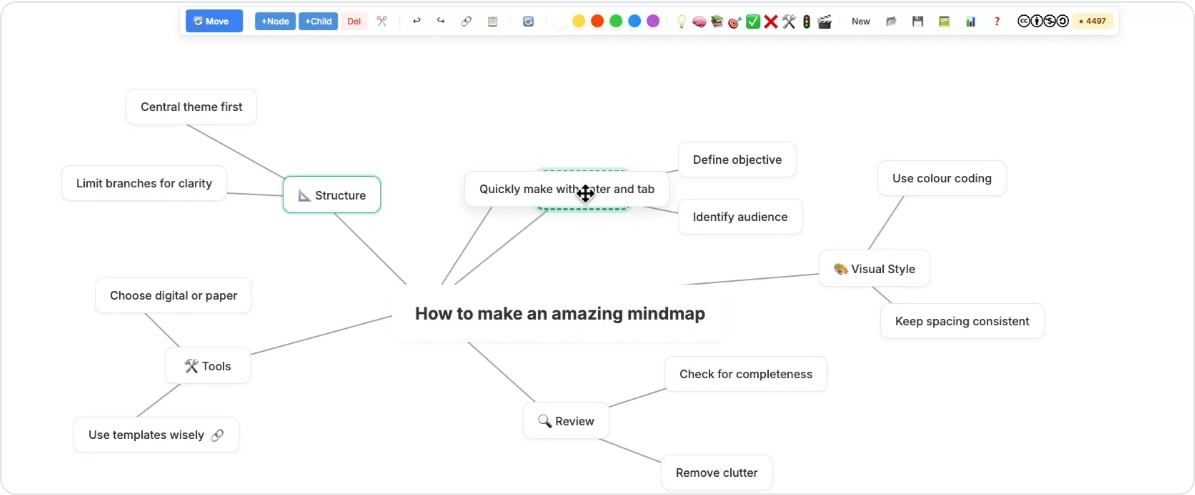

Example PowerPoint file

16

You can change from edit to move mode. This is useful for interactive whiteboards and to reorganize your mindmap

17

If you drag onto another node then it will become a child mode of it
